Follow-up: which fields mean as-at, and which mean what we know now?

Team,

Before this becomes another standing report, can we answer the real question?

Repeated monthly parquet snapshots contain fields that may be updated retrospectively, creating risk for trend analysis and models. The possible stories are that CDC fragments and snapshots are being combined incorrectly, that closure or status fields are backfilled, or that records preserve true as-at state.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2022 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide which fields need event tables, effective dating or restricted use.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: Do not assume a file path date is the effective date of every field.

Thanks
