Follow-up: why did the payment fail, and who owns the fix?

Hi team,

Operations is grouping all failed payments together even though the next action depends on the actual cause.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Can you test these explanations rather than choosing one at the start?

- insufficient funds explains the event
- mandate status or retry sequencing explains the event
- third-party or bank timeout explains the event

The decision is the operational owner, customer message and monitoring rule for each failure family. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions. Do not infer a technical component failure beyond the error and timing fields available.

Thanks
