Follow-up: can one management number be traced back to source?

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Management reports are expanding faster than the evidence showing how each number was sourced, transformed and approved. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Could the answer be that the number can be reperformed from source? Or are we actually seeing that different teams use the same label for different populations? I also do not want us to miss the possibility that manual exclusions are changing the answer.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2022 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which data controls must be formalised before the next assurance review. Please send a control view with the exceptions, owner and reason each item was included; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. Do not create a full enterprise lineage claim; reperform a defined metric and document every limitation.

Regards
