Follow-up: which fees create revenue, and which create avoidable exits?

Team,

Before this becomes another standing report, can we answer the real question?

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point. The possible stories are that fee reversals treat symptoms without fixing the journey, that complaints cluster after specific charges, or that high-use customers tolerate fees when service works.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2022 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Please prepare a one-page finding note plus the underlying CSV for our own review. The output must help us decide which fee, wording, waiver or product design should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thanks
