Follow-up: A decline is only the first event; what did the customer do next?

Team,

Before this becomes another standing report, can we answer the real question?

The same decline code can lead to a successful retry, an ATM attempt, a phone call or lost activity. The possible stories are that most declines recover immediately, that poor explanations drive complaints more than the decline itself, or that repeat declines cluster by card state or channel.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide which decline reasons need rule, message or service changes.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data does not contain merchant terminal logs or card-scheme dispute outcomes.

Thanks
