Follow-up: did digital adoption remove friction or move it?

Team,

Before this becomes another standing report, can we answer the real question?

Product needs to define successful channel adoption as sustained useful activity rather than enrolment or one event. The possible stories are that customers return to assisted channels after failure, that first successful use predicts continued use, or that adoption differs by product and customer need.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2022 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide which onboarding journey and success metric should change.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency.

Please state the limitation plainly: Available data supports channel behaviour but not every app screen, click or abandoned session.

Thanks
