Follow-up: why did the customer have to ask twice?

Hi,

This came up in a working session and nobody had the same definition.

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the first contact did not resolve the issue; channel handover loses context; or transaction posting changed after the first answer.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which journeys need process redesign, clearer wording or ownership. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thank you
