Follow-up: where does a loan application become a customer problem?

Team,

Before this becomes another standing report, can we answer the real question?

Loan Products wants to understand application drop-off, decline reasons, booked loans and early repayment stress as one journey. The possible stories are that some high-conversion channels create weaker early outcomes, that affordability declines are concentrated by product, or that documentation friction drives drop-off.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide which application step, policy explanation or channel process should change.

Data available: the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly customer and KYC snapshots; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments.

Please state the limitation plainly: Do not optimise approval rate without affordability, conduct and later-outcome controls.

Thanks
