Follow-up: did the bank charge customers after its own process failed?

Morning,

I need help with something that sounds simple but probably is not.

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

The questions I would ask in the room are:

1. What would we expect to see if bank-side delay creates avoidable charges?
2. What evidence would instead support that similar cases receive different remedies?
3. How do we rule out that fees follow customer-caused failure?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2022 as the new evidence point rather than recycling the earlier conclusion. Please work towards whether a control, remediation population or policy clarification is required. A useful output would be a working Excel file with the exception population and clear columns.

Use transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations. One caution: The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Regards
