Relevance, eligibility and bad timing

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Could the answer be that service recovery should precede selling? Or are we actually seeing that campaign eligibility differs from likely conversion? I also do not want us to miss the possibility that recent behaviour identifies a useful product need.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2022 as the new evidence point rather than recycling the earlier conclusion. The practical decision is the decision rules and evaluation design for a controlled campaign. Please send a working Excel file with the exception population and clear columns; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Regards
