Follow-up: which customer records genuinely need KYC attention first?

Hi,

This came up in a working session and nobody had the same definition.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: many document gaps belong to inactive or closed accounts; higher-risk active accounts should lead; or company ownership and cross-border activity create distinct needs.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2023 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the refresh sequence, exclusion rules and customer-contact approach. Please bring a model-ready table, data dictionary and an honest baseline, including a few cases we can trace from source to conclusion.

The available evidence is monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Thank you
