Follow-up: why are customers coming back to the branch?

Hi team,

Regional managers suspect that statement requests, card problems and failed digital journeys are creating avoidable branch demand.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2023 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Can you test these explanations rather than choosing one at the start?

- specific communications fail to explain the next step
- customers prefer branch for complex needs
- service failures drive repeat visits

The decision is which demand should be removed, redirected or staffed differently. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories. There is no branch queue-time or staff-roster table; infer demand drivers, not staffing productivity.

Thanks
