Follow-up: failure reason is not root cause

Team,

Before this becomes another standing report, can we answer the real question?

Operations is grouping all failed payments together even though the next action depends on the actual cause. The possible stories are that mandate status or retry sequencing explains the event, that third-party or bank timeout explains the event, or that insufficient funds explains the event.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2023 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide the operational owner, customer message and monitoring rule for each failure family.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not infer a technical component failure beyond the error and timing fields available.

Thanks
