Follow-up: useful does not mean everyone should see it

Hi,

This came up in a working session and nobody had the same definition.

Teams are asking for customer identity, risk, income and contact fields in broad analytical extracts.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: most use cases need derived or masked fields; restricted identifiers are being copied for convenience; or different projects require different retention and access.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2023 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the shared schema, restricted extension and audit trail. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. Minimise access to identity, contact, protected and investigation fields; usefulness alone is not a lawful purpose.

Thank you
