Follow-up: first-contact resolution from the customer's side

Hi team,

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2023 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?

- channel handover loses context
- the first contact did not resolve the issue
- transaction posting changed after the first answer

The decision is which journeys need process redesign, clearer wording or ownership. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thanks
