What do the nostro breaks say about our correspondent exposure?

Hi team,

Correspondent payment delays and beneficiary-routing alerts may be creating both liquidity noise and financial-crime exposure.

Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Can you test these explanations rather than choosing one at the start?

- specific intermediaries create repeated settlement delay
- late confirmations explain most breaks
- split payments are concentrating on common beneficiaries

The decision is whether to change correspondent limits, escalate a bank relationship or tighten pre-payment review. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from SWIFT messages, correspondent alerts and nostro breaks; transaction-level timestamps, channels, amounts, statuses and error context; monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories. Do not infer the bank's full nostro position from exception records.

Thanks
