Follow-up: please trace the fee and interest exceptions

Hi,

This came up in a working session and nobody had the same definition.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the issue is statement timing; reversals are not inheriting the original reference cleanly; or the product configuration and transaction description disagree.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2023 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please bring a one-page finding note plus the underlying CSV for our own review, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Thank you
