### Follow-up: account opening is not the end of onboarding

---

Morning,

I need help with something that sounds simple but probably is not.

Branch Network wants to separate productive onboarding from accounts that never progress beyond opening and initial deposit. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

The questions I would ask in the room are:

1. What would we expect to see if first useful activity varies by branch?
2. What evidence would instead support that some customer types need assisted follow-up?
3. How do we rule out that card or online activation friction delays use?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2024 as the new evidence point rather than recycling the earlier conclusion. Please work towards where branch coaching or onboarding process changes are needed. A useful output would be a one-page finding note plus the underlying CSV for our own review.

Use monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency. One caution: Do not rank branches on raw volume without controlling for opening month, customer mix and account type.

Regards
