Follow-up: vulnerability signals and customer treatment

Hi,

This came up in a working session and nobody had the same definition.

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: channel access affects resolution; standard contact strategies create repeat complaints; or income and collections stress identify higher exposure.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2024 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which customer-treatment controls and monitoring indicators should be introduced. Please bring a short decision pack with no more than five slides and an attached evidence table, including a few cases we can trace from source to conclusion.

The available evidence is monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Thank you
