Follow-up: primary-bank behaviour, not account-open counts

Hi team,

The board keeps using active accounts as a proxy for customer primacy, and that assumption needs to be challenged.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2024 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Can you test these explanations rather than choosing one at the start?

- customers keep the account open but move useful activity elsewhere
- regular inflows and recurring payments indicate a primary relationship
- fee or service friction precedes the drop in activity

The decision is how Keystone should define a primary customer and which customers need service recovery rather than marketing. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. Use transaction behaviour as a proxy. Do not claim to observe activity held at another bank.

Thanks
