Follow-up: KYC completeness and account status need one rule

Team,

Before this becomes another standing report, can we answer the real question?

Regulatory Reporting needs a reproducible population of active, restricted and closed accounts with the relevant customer due-diligence fields. The possible stories are that company and individual rules are being mixed, that snapshot timing explains the difference, or that status changes are not applied consistently.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2024 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide the agreed population rule, data-quality exceptions and evidence trail.

Data available: monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories.

Please state the limitation plainly: The dataset can test completeness and consistency, not determine whether every document is authentic.

Thanks
