Follow-up: missed payment, service failure or genuine hardship?

Team,

Before this becomes another standing report, can we answer the real question?

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems. The possible stories are that repeat failures and complaints indicate deeper stress, that some customers recover after payday, or that bank-side processing issues are entering collections.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2024 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide which treatment path, contact tone and escalation should apply.

Data available: collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Thanks
