Follow-up: find the cases that cross too many teams

Hi team,

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2024 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- unclear ownership keeps cases open
- late posting generates downstream work
- a small set of exception types creates most hand-offs

The decision is which process should be redesigned and where ownership should sit. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations. There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Thanks
