Follow-up: customer statement, system record and contact notes need one chronology

Hi team,

A customer dispute cannot be assessed from the complaint text alone because authorisation, posting, reversal and contact dates differ.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2024 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Can you test these explanations rather than choosing one at the start?

- a bank-side delay caused the loss
- the customer saw a temporary posting as final
- the complaint outcome does not match the underlying evidence

The decision is the evidence position and whether remediation should precede correspondence. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Use statements only where they exist and do not invent merchant evidence or call recordings.

Thanks
