Channel handover and unresolved intent

Team,

Before this becomes another standing report, can we answer the real question?

Digital containment is being reported as success even when customers later call, visit a branch or complain. The possible stories are that contained contacts resolve the need, that certain intents should begin with an agent, or that handover occurs too late.

We looked at a version of this before. For the September 2024 review, please show what changed and whether the earlier conclusion still holds. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which intents belong in self-service and how success should be measured.

Data available: customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories.

Please state the limitation plainly: Containment is a proxy; use repeat contact and observable outcomes rather than claiming customer satisfaction.

Thanks
