Follow-up: next best action starts with next best silence

Team,

Before this becomes another standing report, can we answer the real question?

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events. The possible stories are that campaign eligibility differs from likely conversion, that recent behaviour identifies a useful product need, or that service recovery should precede selling.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2024 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide the decision rules and evaluation design for a controlled campaign.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Thanks
