Follow-up: the customer statement and transaction view disagree

Team,

Before this becomes another standing report, can we answer the real question?

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. The possible stories are that the product configuration and transaction description disagree, that reversals are not inheriting the original reference cleanly, or that the issue is statement timing.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2024 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide whether Finance needs a mapping correction, a posting control or a customer remediation list.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not calculate general-ledger balances; no general ledger is present.

Thanks
