Follow-up: bundle uptake versus useful activity

Team,

Before this becomes another standing report, can we answer the real question?

Product bundles are recorded at account level, but Pricing needs to know whether customers use optional features and remain active. The possible stories are that optional products deepen activity, that default products are mistaken for cross-sell, or that some bundles increase service contact without increasing use.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2024 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide which bundle components should be retained, repriced or removed from campaigns.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses.

Please state the limitation plainly: Product enrolment is not the same as product usage; define observable use before measuring adoption.

Thanks
