### Follow-up: analytics needs a source-of-truth decision

---

Team,

Before this becomes another standing report, can we answer the real question?

A requested analysis changes depending on whether the team starts from transaction, debit-order, account-status or customer-contact records. The possible stories are that one source is updated retrospectively, that matching logic is joining unrelated records, or that the sources record different stages of one event.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide the source precedence rule and the cases that must remain explicitly unresolved.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not force agreement by dropping exceptions; preserve contradictory evidence for owner review.

Thanks
