Follow-up: please find decisions that do not match the recorded evidence

Team,

Before this becomes another standing report, can we answer the real question?

Audit is testing whether approvals, declines, restrictions and collections outcomes are consistent with recorded policy inputs. The possible stories are that missing data looks like an override, that overrides are rare and explainable, or that a channel or period has a materially different decision pattern.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a one-page finding note plus the underlying CSV for our own review. The output must help us decide the sample for process-owner walkthroughs and policy evidence.

Data available: the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly account snapshots, status events, limits, product enrolments and signatories; collections cases, promises to pay and recovery payments; monthly customer and KYC snapshots.

Please state the limitation plainly: The files do not contain every approval authority or policy version; flag unexplained differences rather than declaring misconduct.

Thanks
