Follow-up: reissue, activation and first-use journey

Hi team,

Card Operations needs to know whether replacement cards become usable quickly and whether old-card attempts continue after reissue.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?

- ATM and transaction channels reflect card history differently
- old credentials continue to generate declines
- customers resume normal use quickly

The decision is which reissue controls or customer messages need improvement. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. Card numbers are historical lists in the account snapshot; use issue and expiry dates to determine the active card.

Thanks
