Follow-up: the active-account number may be flattering us

Hi,

This came up in a working session and nobody had the same definition.

The board keeps using active accounts as a proxy for customer primacy, and that assumption needs to be challenged.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: fee or service friction precedes the drop in activity; regular inflows and recurring payments indicate a primary relationship; or customers keep the account open but move useful activity elsewhere.

The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2025 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is how Keystone should define a primary customer and which customers need service recovery rather than marketing. Please bring a model-ready table, data dictionary and an honest baseline, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. Use transaction behaviour as a proxy. Do not claim to observe activity held at another bank.

Thank you
