Follow-up: the bank should not confuse low income with low value

Morning,

I need help with something that sounds simple but probably is not.

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

The questions I would ask in the room are:

1. What would we expect to see if channel access affects resolution?
2. What evidence would instead support that income and collections stress identify higher exposure?
3. How do we rule out that standard contact strategies create repeat complaints?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2025 as the new evidence point rather than recycling the earlier conclusion. Please work towards which customer-treatment controls and monitoring indicators should be introduced. A useful output would be a short decision pack with no more than five slides and an attached evidence table.

Use monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. One caution: Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Regards
