Why do late postings keep changing yesterday's answer? - 2025 control review

Hi,

This came up in a working session and nobody had the same definition.

Finance and Operations are reconciling the same activity to different days because authorisation, posting and statement dates do not always line up.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: most breaks are timing differences; a specific channel is posting outside the expected cut-off; or retries or reversals are being counted twice.

Please start with the decision we need to make, then show whether the available evidence is strong enough to support it. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2025 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is whether matching rules, cut-off times or source ownership must change. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; available customer bank statements. Statements are only available for selected accounts and months; use them as evidence samples, not as the population denominator.

Thank you
