Quick question: the intermediary-bank exceptions need a service review

Hi team,

A small set of intermediary banks appears in settlement delays and routing alerts, raising both service and risk questions.

We looked at a version of this before. For the March 2025 review, please show what changed and whether the earlier conclusion still holds. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?

- the operational and financial-crime populations overlap only partly
- beneficiary patterns explain the alerts
- one intermediary drives most delay

The decision is whether to escalate the correspondent, change monitoring or gather contractual evidence. Please give us a one-page finding note plus the underlying CSV for our own review.

You should be able to build the evidence from SWIFT messages, correspondent alerts and nostro breaks; transaction-level timestamps, channels, amounts, statuses and error context. Exception files do not contain the full correspondent contract or all successful traffic.

Thanks
