Follow-up: account closed, but was the customer journey coherent?

Hi team,

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- downstream activity continued after the status event
- the main risk is poor communication rather than an incorrect decision
- the closure was operationally complete

The decision is whether the matter can be answered, remediated or requires formal legal review. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Thanks
