Follow-up: the customer table needs an access design

Hi team,

Teams are asking for customer identity, risk, income and contact fields in broad analytical extracts.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2025 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Can you test these explanations rather than choosing one at the start?

- most use cases need derived or masked fields
- restricted identifiers are being copied for convenience
- different projects require different retention and access

The decision is the shared schema, restricted extension and audit trail. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. Minimise access to identity, contact, protected and investigation fields; usefulness alone is not a lawful purpose.

Thanks
