Follow-up: please hold back a control group before launch

Hi team,

Analytics has been asked to report campaign success, but selected customers may already have been more likely to convert.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?

- targeting explains the apparent lift
- service problems suppress otherwise suitable offers
- the campaign creates incremental response

The decision is the treatment, control, success window and guardrail measures before the next campaign launches. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from campaign design and customer responses; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. Historical campaign responses alone do not identify causal impact where no comparable control group exists.

Thanks
