Who needs an explanation before the next rate change? - 2025 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Loan Products needs to identify borrowers most exposed to repricing and the questions customers are likely to raise. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Could the answer be that variable-rate customers show higher payment pressure? Or are we actually seeing that clear communication reduces avoidable complaints? I also do not want us to miss the possibility that thin affordability buffers matter more than loan size.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2025 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which customers need proactive communication and which product assumptions need review. Please send a working Excel file with the exception population and clear columns; I need the exceptions and counter-examples, not only an average.

Work from the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context. Use recorded loan rates and behaviour; do not infer contractual repricing terms not present in the data.

Regards
