Follow-up: recovery payments need a proper bridge

Team,

Before this becomes another standing report, can we answer the real question?

Collections and Finance are using different notions of a successful recovery, especially when payments arrive after the promised date or through another channel. The possible stories are that a payment reaches the account but not the collections case, that late payments are being treated as broken promises, or that partial cures are being reported as full cures.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide the definition of cure and the exception queue that Finance and Collections will both use.

Data available: collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: The data can reconcile customer and case activity, but not the accounting ledger entry.

Thanks
