Which exceptions quietly become old? - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Operations needs an ageing view that prioritises unresolved customer impact rather than raw exception count. The possible stories are that older cases cluster in one process, that status updates close records without resolving the transaction, or that small-value cases remain open because ownership is unclear.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide the exception priority rule and escalation threshold.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; monthly account snapshots, status events, limits, product enrolments and signatories.

Please state the limitation plainly: Use observable dates and outcomes; do not infer internal queue age where no queue record exists.

Thanks
