Follow-up: relevance, eligibility and bad timing

Morning,

I need help with something that sounds simple but probably is not.

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if campaign eligibility differs from likely conversion?
2. What evidence would instead support that recent behaviour identifies a useful product need?
3. How do we rule out that service recovery should precede selling?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2025 as the new evidence point rather than recycling the earlier conclusion. Please work towards the decision rules and evaluation design for a controlled campaign. A useful output would be a short decision pack with no more than five slides and an attached evidence table.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. One caution: Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Regards
