Resolved in the system, but resolved for the customer? - 2025 control review

Hi,

This came up in a working session and nobody had the same definition.

Complaint status alone may overstate resolution when the same customer returns, the transaction remains unresolved or the account closes.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: specific categories lead to repeat contact or attrition; resolved complaints do not recur; or resolution notes are generic.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2025 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which complaint outcomes need quality review and which root causes need fixing. Please bring a Power BI page with drill-through to a reproducible case list, including a few cases we can trace from source to conclusion.

The available evidence is customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories. The analysis can identify recurrence and later behaviour, not customer satisfaction that was never recorded.

Thank you
