We have three definitions of active customer - 2025 control review

Morning,

I need help with something that sounds simple but probably is not.

Analytics is receiving requests that use the same business term for different populations, dates and customer relationships. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if snapshot timing creates the difference?
2. What evidence would instead support that an undocumented exclusion is changing the denominator?
3. How do we rule out that the teams need different metrics?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2025 as the new evidence point rather than recycling the earlier conclusion. Please work towards the governed definition, owner, exclusions and reconciliation bridge. A useful output would be a Power BI page with drill-through to a reproducible case list.

Use monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context. One caution: A technically consistent definition still needs business ownership and approval.

Regards
