What happens after a card is replaced?

Morning,

I need help with something that sounds simple but probably is not.

Card Operations needs to know whether replacement cards become usable quickly and whether old-card attempts continue after reissue. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if old credentials continue to generate declines?
2. What evidence would instead support that ATM and transaction channels reflect card history differently?
3. How do we rule out that customers resume normal use quickly?

Please work towards which reissue controls or customer messages need improvement. A useful output would be a one-page finding note plus the underlying CSV for our own review.

Use monthly account snapshots, status events, limits, product enrolments and signatories; ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. One caution: Card numbers are historical lists in the account snapshot; use issue and expiry dates to determine the active card.

Regards
