Which customers actually treat Keystone as their main bank?

Morning,

I need help with something that sounds simple but probably is not.

The board keeps using active accounts as a proxy for customer primacy, and that assumption needs to be challenged. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

The questions I would ask in the room are:

1. What would we expect to see if fee or service friction precedes the drop in activity?
2. What evidence would instead support that customers keep the account open but move useful activity elsewhere?
3. How do we rule out that regular inflows and recurring payments indicate a primary relationship?

Please work towards how Keystone should define a primary customer and which customers need service recovery rather than marketing. A useful output would be a working Excel file with the exception population and clear columns.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. One caution: Use transaction behaviour as a proxy. Do not claim to observe activity held at another bank.

Regards
