Quick question: which fields mean as-at, and which mean what we know now?

Team,

Before this becomes another standing report, can we answer the real question?

Repeated monthly parquet snapshots contain fields that may be updated retrospectively, creating risk for trend analysis and models. The possible stories are that records preserve true as-at state, that closure or status fields are backfilled, or that CDC fragments and snapshots are being combined incorrectly.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Please prepare a one-page finding note plus the underlying CSV for our own review. The output must help us decide which fields need event tables, effective dating or restricted use.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: Do not assume a file path date is the effective date of every field.

Thanks
