Where did the process override its own rule?

Hi team,

Audit is testing whether approvals, declines, restrictions and collections outcomes are consistent with recorded policy inputs.

Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Can you test these explanations rather than choosing one at the start?

- overrides are rare and explainable
- missing data looks like an override
- a channel or period has a materially different decision pattern

The decision is the sample for process-owner walkthroughs and policy evidence. Please give us a one-page finding note plus the underlying CSV for our own review.

You should be able to build the evidence from the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly account snapshots, status events, limits, product enrolments and signatories; collections cases, promises to pay and recovery payments; monthly customer and KYC snapshots. The files do not contain every approval authority or policy version; flag unexplained differences rather than declaring misconduct.

Thanks
