Which fees create revenue, and which create avoidable exits?

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Could the answer be that fee reversals treat symptoms without fixing the journey? Or are we actually seeing that high-use customers tolerate fees when service works? I also do not want us to miss the possibility that complaints cluster after specific charges.

The practical decision is which fee, wording, waiver or product design should be tested. Please send a one-page finding note plus the underlying CSV for our own review; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Regards
