Collections says paid; Finance still sees arrears

Hi team,

Collections and Finance are using different notions of a successful recovery, especially when payments arrive after the promised date or through another channel.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- a payment reaches the account but not the collections case
- late payments are being treated as broken promises
- partial cures are being reported as full cures

The decision is the definition of cure and the exception queue that Finance and Collections will both use. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data can reconcile customer and case activity, but not the accounting ledger entry.

Thanks
